

## Statement on Declaration of Performance

The declaration of performance (DoP) is key concept in the construction products regulation (CPR) of the European Union No. 305/2011 from 9 march 2011, which replaced the previous construction products directive 89/106/EEC from 21 december 1988. The DoP gives the manufacturer the opportunity to deliver the information about the essential characteristics of his product he wants to deliver to the market.

The manufacturer shall draw up a Declaration of Performance when a product covered by a harmonised standard (hEN) or a European Technical Assessment (ETA) is placed on the market. By drawing up this DoP, the manufacturer assumes the responsibility for the conformity of the construction product with the declared performance. DoP provides information on the performance of a product, such as the extent to which it is airtight or fire resistant etc.

Products from BBC Cellpack Electrical Products (cable accessories, like: joints, terminations, separable connectors, screw connectors) **are not** "construction products" in the meaning of the construction products regulation. Construction product is a product or kit which is produced and placed on the market for incorporation in a permanent manner in construction works (buildings or any civil engineering works) or parts thereof and the performance of which influences the performance of the construction works with respect to the basic requirements for construction works.

Construction products, as mention above, are covered by European harmonised standards (hEN), which are being listed in the summary of references of harmonised standards published in the official journal – regulation (EU) No 305/20111 of the European parliament. **Standards listed there do not cover cable accessories from BBC Cellpack Electrical Products.**

Therefore, Products from BBC Cellpack Electrical Products do not need a declaration of performance (DoP) in the meaning of the CPR of the European Union No. 305/2011.
